Technical Assistance Webinar for RFA-MD-17-006, “Research Centers in Minority Institutions (RCMI) (U54)”

Nathan Stinson, Jr
Division of Scientific Programs

Thomas Vollberg
Scientific Review Branch

November 14, 2017
Webinar starts at 1:30 PM EST
Webinar Tips

Participants will be in **Listening Mode** and will not be able to ask questions verbally.

Participants may ask questions using the chat feature. Questions will be answered during the Q&A session at the end of the webinar as time permits.

These slides and a recording of today’s webinar will be available on the NIMHD website: [http://www.nimhd.nih.gov/](http://www.nimhd.nih.gov/).
Agenda

I. RFA background and objectives

II. Application information

III. Peer review of applications

IV. Timeline for submission, review, and selection of cooperative agreements

V. Selected FAQs and participant questions
Part I: RFA Background and Objectives
Research Centers in Minority Institutions (RCMI) program established by NIH in 1985 as a result of congressional interest expanding national capability for health sciences research.

- Recognition of important role that institutions with historical commitment to diverse individuals have played in supporting scientific research.

- Program managed by National Center for Research Resources (NCRR) until 2012, when it transferred to NIMHD.
Background - 2

- RCMI Program has included:
  - Research Centers in Minority Institutions Program (G12)
  - Infrastructure for Clinical and Translational Research (RCTR) [U54]
  - RCMI Translational Research Network (RTRN) (U54)
  - Clinical Research Education and Career Development (CRECD) Program (R25)
Background - 3

Changes from previous RCMI G12 FOAs

• G12 and RCTR U54 consolidated into single U54 program; all awards cooperative agreements.

• Eligibility limited to institutions that receive less than $50 million in average annual NIH funds in prior 3 years.

• 3-tiered structure with opportunities for capacity building and research in basic biomedical, behavioral, and/or clinical research.

• Inclusion of pilot project program and at least one research project.

• Consolidation of separate infrastructure-related cores into a single Research Infrastructure Core.
Changes from previous RCMI U54 FOA, RFA-MD-17-003

- Resubmissions allowed
- Center focus on basic biomedical, behavioral, and clinical research based on research project in that area
- Number of research projects now limited to three (3)
- For renewal applications, the progress report goes in the Research Strategy of the Overall component
- National Institute of Allergy and Infectious Diseases (NIAID) is participating in FOA
Objectives of RFA

To provide support for specialized research centers in institutions that offer doctoral degrees in the health professions or health-related sciences and have an historical and current commitment to educating underrepresented students.

Primary goals of the centers are to:

1) enhance institutional research capacity within the areas of basic biomedical, behavioral and/or clinical research;

2) enable all levels of investigators to become more successful in obtaining competitive extramural support, particularly on diseases that disproportionately impact minority and other health disparity populations;

3) foster environments conducive to career enhancement with a special emphasis on development of new and early career investigators;

4) enhance the quality of all scientific inquiry and promote research on minority health and health disparities; and

5) establish sustainable relationships with community-based organizations that will partner with the RCMI Institution.
Part II: Application Information
Center Eligibility

Domestic Institution of Higher Education

- Received an average of less than $50 million per year of NIH support for the past three fiscal years.
- Awards doctorate degrees in the health professions or the sciences related to health.
- Has a historical and current mission to educate students identified as underrepresented in biomedical research

OR

Has a documented track record of:
  1. recruiting, training and/or educating, and graduating underrepresented students.
  2. for institutions that deliver health care services, providing clinical services to medically underserved communities.
Center Focus Area(s)

Centers must have an explicit focus on one or more of the following areas: basic biomedical, behavioral, and/or clinical research.

• Behavioral and Clinical research areas expected to emphasize minority health and health disparities.

Focus can only be demonstrated by one or more research projects within the focus area.
Center Cores and Components - 1

Administrative Core

- Provides administrative and logistical support for all center activities.
- Provides career enhancement activities for post-doctoral fellows and junior investigators.
- Provides an evaluation of each proposed activity/core and evaluation of the impact of the center.
Center Cores and Components - 2

Research Infrastructure Core

• Provides resources to assist investigators with developing design and analysis plans for studies.
  • Includes faculty-level expertise in research methodology, specialized laboratory techniques, statistics, bioinformatics and/or health informatics.

• May provide linkages to other NIH-supported programs (e.g., CTSA).

• Core research resources must be for multiple users across various disciplines.

• Minor alteration and renovation (A&R) costs allowed up to $500K in first year only to improve research/core laboratories or animal facilities.
Center Cores and Components - 3

Investigator Development Core

• Provides pilot project program that:
  1) allows researchers to generate preliminary data for subsequent submission of grant applications related to minority health and health disparities, or
  2) develops new technologies to better position the institution to conduct basic biomedical research.

• Program may support up to 5 pilot projects per year at $30K-$50K per project.
  • Minimum direct cost budget allocation for Pilot Project Program is $150,000/year annually).

• Pilot project investigators should be at the senior post-doctoral or assistant professor level and include individuals from backgrounds underrepresented in biomedical research careers.
Community Engagement Core

- Facilitates long-term relationships with community based organizations to:
  - address their health-related concerns.
  - to promote participation in research and recruitment and retention of study participants.
  - to disseminate findings from research projects.
Research Projects

• Up to 3 research projects may be proposed in basic biomedical, behavioral, and/or clinical/health services research.
  • Having a project in each area is not required.
  • Behavioral and clinical/health services project(s) must emphasize minority health or health disparities.
• Projects may vary in scope and budget, but together must comprise 20-30% of direct costs per year.
• Projects may be led by investigators of any rank, including senior or established scientists.
Recruitment Core (Optional)

- Supports hiring of investigators who have track records of independent research support who can serve as mentors to early stage investigators.
  - New faculty members may be provided with start up funds of up to $100,000 direct costs per year for up to 2 years.
Award Budget

• Budgets limited to $3,000,000 in direct costs per year.

• Budget request should correspond to number of focus areas (basic biomedical, behavioral, clinical research).
  • 3 focus areas - up to $3 million direct costs
  • 2 focus areas - up to $2,250,000 direct costs
  • 1 focus area – up to $1,500,000 direct costs

• Optional minor A&R costs of up to $500K in first year do not count towards these direct cost limits.
Part III:
Peer Review of Applications
U54 Program Peer Review

• Applications will be assessed for completeness by the Center for Scientific review (CSR).

• NIMHD program staff will assess the applications for responsiveness.

• NIMHD scientific review officer (SRO) will assemble a panel of experts from the extramural community to peer review the applications.
Preparations for Peer Review

FOA Specific Characteristics

• Program goals
• Mechanism specific characteristics
• Review Criteria: Specific to this FOA queries
• Additional Review Criteria (e.g. Human Subjects)

Administrative Review of Applications

• RFA requirements
• personnel
• expertise
Reviewer Selection

Scientific Expertise
- as defined in FOA
- Collective content of the applications

Attention to Conflict of Interest

Diverse representation of opinion
- gender
- demographics
- geography
Review Process

• Pre-Meeting Written Opinions
• Overall Impact
• Resume
Peer Review Criteria (Overall)

Reviewers evaluate an application’s potential to succeed

Overall Impact

• Reflects the likelihood for the Center to exert a sustained, powerful influence on the research field(s).

• Overall impact score: Consideration of the Overall criteria, evaluations of cores and projects and additional review criteria … but not an average.
Additional Review Criteria
(included in the determination of the overall score)

Human subjects
Protection of Human Subjects against research risk
Five criteria

Inclusion
Women
Children under the age of 18
Minorities

Other criteria
Vertebrate Animals
Four criteria
Biohazards
Additional Review Considerations
(criteria not included in the determination of the overall score)

Other application information which is assessed but not included in the determination of the impact score

• Select Agents Research
• Resource Sharing Plan
• Budget and Period of Support
• Authentication of key Biological and/or Chemical Resources

http://grants.nih.gov/reproducibility/index.htm
Some applications may be “streamlined” -- not discussed (ND)

- Applications may undergo a selection process in which only those applications deemed to have the highest scientific and technical merit (generally the top half of applications under review) will be discussed and assigned an overall impact score.

Final Impact Score based on average of all voting reviewers x 10
- Scores range from 10 (exceptional) to 90 (poor)

A summary statement for all applications would be available approximately 30 days after the review meeting

Do not contact the members of the review panel!
RCMI RFA (RFA MD17-006)

• ONE application per institution

• Eligibility – Domestic Institutions of Higher Education; An average of <$50M NIH support over past 3 years; Award doctoral degrees in health profession/health science; Historical and current mission to educate URM students; Record of graduating URM students and, if applicable, for delivery of clinical services to medically underserved communities.
  o “Institutional Information”. As instructed, Overall component-Other Attachments.

• Multicomponent application
  o Overall section
    • Overall research strategy, including rationale for focus area(s) (biomedical research, biobehavioral research, clinical research), and, if more than one area, rationale for the importance of larger program to the overall goals
    • Letter(s) of support from high level institutional official(s)
      o Cores: Administrative Core, Research Infrastructure Core Investigator Development Core, Community Engagement Core, (optional) Recruitment Core
      o 1-3 Research Projects Review Criteria

• Application Review: See RFA for Criteria that apply in assessing the Cores, Research Projects and Overall Impact.
Videos on Peer Review Topics

The Center for Scientific Review has produced videos with an inside look at peer review for scientific and technical merit and with tips for preparing applications.

In Doubt

Phone NIH

- Peer Review, Program and Grant Administration Contacts are included on the last slide of this presentation and in the RFA.
Part IV:
Timeline for Submission, Review, and Selection of Cooperative Agreements
Timeline

• Letter of Intent Due Date: November 15, 2017
• Application Due Date: December 15, 2017
• Peer Review Meeting: March, 2018
• Council Review: May, 2018
• Earliest Start Date: July, 2018
Part V: Selected FAQs and Participant Questions

Send questions via webinar chat.
Selected FAQs: Eligibility - 1

**Question**: Can NIMHD confirm that my institution is eligible to apply?

**Answer**: No. NIMHD staff can answer questions you have about the eligibility requirements, but it is the responsibility of the institution to determine if all eligibility criteria have been met.

**Question**: My institution as a whole exceeds the NIH funding limit, but my school is below the funding threshold. Can my school submit an application?

**Answer**: That depends on how your institution is organized. If your school/department has its own DUNS or NIH IPF number, it can serve as an applicant institution, providing all other eligibility criteria are met.
Selected FAQs: Eligibility - 2

Question: Does a residency program in a hospital count towards the health-related doctoral degree requirement?

Answer: No. Only Institutions of Higher Education are eligible, per Congressional language that established the RCMI program.

Question: My institution offers health-related doctoral degrees, but not in my department. Can I be the PI on the application?

Answer: This decision would be left up to the applicant institution.
Question: If an institution submits more than one application, will only one application be selected for funding if they all score well in peer review?

Answer: Only one application per institution will be reviewed. If multiple applications are submitted, NIMHD will request that the institution select which application will move forward.
Selected FAQs: Focus Areas - 1

Question: Can the focus areas shift over the course of the grant period?

Answer: Yes. It is not required that the Center maintain the same foci (or budgets attached to them) over the 5 year period.

However, the funding level for the number of focus areas corresponds to the yearly budget. For example, if $3 million in direct costs were requested in any budget year, research projects in all 3 focus areas would need to be active in that year.

Question: Do we have to propose a research project in each of the three areas?

Answer: No, unless you’re requesting the full budget amount of $3 Million direct costs.
Question: Do all research projects and pilot projects in clinical or behavioral research have to focus on racial/ethnic minorities?

Answer: No. Projects can emphasize minority health OR health disparities. Health disparity populations include racial/ethnic minorities, socioeconomically disadvantaged populations, underserved rural populations, and sexual and gender minorities.
Selected FAQs: Cores and Components - 1

Question: Should Advisory Committee members be named in the application?

Answer: No. The planned roles and expertise of the Advisory Committee should be described in the application, but it is not necessary to provide names of specific members.

Question: Does each section of the Research Infrastructure Core (biostatistics, laboratory technologies, etc.) have a 6-page limit?

Answer: No. The page limit for the entire Research Infrastructure Core is 6 pages.
Question: Are there different page limits depending on the scope of the research projects (e.g., R01 level vs. R21 level)?

Answer: No, the page limit for each research project is 12 pages. Remember, this is a page limit, not the number of pages required. Projects that are smaller in scope may not require as many pages as larger projects.

Question: Should individual pilot projects be described in the application?

• Answer: No. The application should describe the Pilot Project Program (soliciting, selecting, supporting, and monitoring pilot projects), not individual projects, which should be selected after the Center is awarded.
Question: Can salary support for post-docs be included in pilot projects? Other cores?

Answer: Salary support for post-docs is an allowable cost within any center component for those engaged as personnel on research projects or other center activities. Stipends and fellowships, which are associated with training programs, are not allowed in this RFA.
Selected FAQs: Letters of Intent

Question: Is the letter of intent mandatory? Is the letter of intent binding?

Answer: No and no. The purpose of the letter of intent (LOI) is to give NIMHD, particularly the review office, a sense of how many applications to expect and what kinds of expertise might be needed to review them. It is possible to submit an LOI and then not submit an application, and vice versa.
